## Pancreatic Disease: State of the Art and Future Aspects of Research

In the past several years much progress has been made in understanding the basic mechanisms of pancreatic physiology and the pathogenesis, diagnosis, and treatment of pancreatic disease. A symposium took place in Munich on 18-19 September 1998 that aimed at summarizing current knowledge of the exocrine pancreas and giving direction to future research. It targeted all practitioners and scientists working in the field of exocrine pancreatic disease. The symposium was also designed to stimulate young persons embarking on a career in this area. It was an exciting meeting for all of us. We wish to extend our thanks to all participants for their prompt submission of manuscripts and to Springer Verlag for speedy publication, providing us with an up-to-date volume on pancreatic research. We would also like to thank G. Beyendorff-Hajda and W. Glockner, as well as D. Kriiger, representatives of Knoll Deutschland GmbH, for their organizational assistance and Knoll itself for its generous sponsorship, which enabled colleagues from other countries to participate and made publication of the symposium possible.
