## **Cracking The Genome: Inside The Race To Unlock Human Dna** Kevin Davies

In 1953, James Watson and Francis Crick discovered the double helix structure of DNA. The discovery was a profound, Nobel Prize-winning moment in the history of genetics, but it did not decipher the messages on the twisted, ladderlike strands within our cells. No one knew what the human genome sequence actually was. No one had cracked the code of life. Now, at the beginning of a new millennium, that code has been cracked. Kevin Davies, founding editor of the leading journal in the field, "Nature Genetics," has relentlessly followed the story as it unfolded, week by week, for ten years. Here for the first time, in rich human, scientific, and financial detail, is the dramatic story of one of the greatest scientific feats ever accomplished: the mapping of the human genome. In 1990, the U.S. government approved a 15-year, \$3 billion plan to launch the Human Genome Project, whose goal was to sequence the 3 billion letters of human DNA. At the helm of the project was James Watson, who resigned after only a couple of years, following a feud with National Institutes of Health (NIH) Director Bernadine Healy over gene patenting. His successor was the brilliant young medical geneticist Francis Collins, who had made his name discovering the gene for cystic fibrosis. As Davies reports, Collins is a devout Christian who has traveled to Africa to work in a missionary hospital. He believes the human genome sequence is "the language of God." Just as Collins became project director, J. Craig Venter, a maverick DNA sequencer and Vietnam veteran, was leaving the NIH to start his own private research institute. Venter had developed a simple "shotgun" strategy for sequencing DNA, and his fameskyrocketed when his new institute proved his sequencing system worked by becoming the first to sequence the entire genome of a microorganism. Only 3 percent of the human genome had been sequenced by early 1998, the public project's halfway point. That same year, Venter was approached by PE Corporation to launch a private human genome project. He stunned the world when he announced the formation of a new company to sequence the human genome in a mere three years for \$300 million. A war of words broke out between public and private researchers. Undeterred, Venter built Celera Genomics with the motto "Speed matters. Discovery can't wait." and an \$80 million supercomputer. While the insults intensified, Celera's stock price soared, tumbled, and soared again. Negotiations for cooperation between the public and private institutes began, only to fall apart in acrimony. Then in the spring of 2000 President Clinton stepped in, telling his science adviser to restart negotiations. History was about to be made. Davies captures the drama of this momentous achievement, drawing on his own genetics expertise and interviews with key scientists including Venter and Collins, as well as Eric Lander, an MIT computer wizard who refers to the public genome project as "the forces of good"; Kari Stefansson, the genetics entrepreneur who is remaking Iceland's economy; and John Sulston, chief of the UK genome project, who led the charge against gene patenting. Davies has visited geneticists around the world to illustrate a vast international enterprise working on the frontier of human knowledge. "Cracking the Genome" is the definitive account of how the code that holds the answers to the origin of life, the evolution of humanity, and the future of medicine was broken.

### **From reader reviews:**

#### **Natalie Hernandez:**

The feeling that you get from Cracking The Genome: Inside The Race To Unlock Human Dna may be the more deep you digging the information that hide into the words the more you get serious about reading it. It does not mean that this book is hard to comprehend but Cracking The Genome: Inside The Race To Unlock Human Dna giving you excitement feeling of reading. The copy writer conveys their point in a number of way that can be understood by anyone who read the item because the author of this publication is well-known enough. This particular book also makes your personal vocabulary increase well. That makes it easy to understand then can go along, both in printed or e-book style are available. We recommend you for having this particular Cracking The Genome: Inside The Race To Unlock Human Dna instantly.

#### **Jeffrey Blough:**

This Cracking The Genome: Inside The Race To Unlock Human Dna is great e-book for you because the content which can be full of information for you who always deal with world and possess to make decision every minute. This book reveal it facts accurately using great plan word or we can state no rambling sentences included. So if you are read this hurriedly you can have whole information in it. Doesn't mean it only provides straight forward sentences but tricky core information with wonderful delivering sentences. Having Cracking The Genome: Inside The Race To Unlock Human Dna in your hand like getting the world in your arm, information in it is not ridiculous 1. We can say that no book that offer you world throughout ten or fifteen minute right but this e-book already do that. So , this is certainly good reading book. Heya Mr. and Mrs. active do you still doubt that will?

#### **Carolyn Rolon:**

It is possible to spend your free time to study this book this e-book. This Cracking The Genome: Inside The Race To Unlock Human Dna is simple to create you can read it in the area, in the beach, train as well as soon. If you did not have got much space to bring typically the printed book, you can buy the actual e-book. It is make you quicker to read it. You can save often the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

#### **Betty Dunham:**

Don't be worry if you are afraid that this book may filled the space in your house, you will get it in e-book means, more simple and reachable. This particular Cracking The Genome: Inside The Race To Unlock Human Dna can give you a lot of good friends because by you considering this one book you have thing that they don't and make you more like an interesting person. This kind of book can be one of one step for you to get success. This publication offer you information that possibly your friend doesn't learn, by knowing more than additional make you to be great persons. So , why hesitate? We should have Cracking The Genome: Inside The Race To Unlock Human Dna.
