Ceramics and Composites Processing Methods

Ceramics and Composites Processing Methods

Examines the latest processing and fabrication methods

There is increasing interest in the application of advanced ceramic materials in diverse areas such as transportation, energy, environmental protection and remediation, communications, health, and aerospace. This book guides readers through a broad selection of key processing techniques for ceramics and their composites, enabling them to manufacture ceramic products and components with the properties needed for various industrial applications. With chapters contributed by internationally recognized experts in the field of ceramics, the book includes traditional fabrication routes as well as new and emerging approaches in order to meet the increasing demand for more reliable ceramic materials.

Ceramics and Composites Processing Methods is divided into three sections:

- Densification, covering the fundamentals and practice of sintering, pulsed electric current sintering, and viscous phase silicate processing
- Chemical Methods, examining colloidal methods, sol-gel, gel casting, polymer processing, chemical vapor deposition, chemical vapor infiltration, reactive melt infiltration, and combustion synthesis
- Physical Methods, including directional solidification, solid free-form fabrication, microwave processing, electrophoretic deposition, and plasma spraying

Each chapter focuses on a particular processing method or approach. Collectively, these chapters offer readers comprehensive, state-of-the-science information on the many approaches, techniques, and methods for the processing and fabrication of advanced ceramics and ceramic composites.

With its coverage of the latest processing methods, *Ceramics and Composites Processing Methods* is recommended for researchers and students in ceramics, materials science, structural materials, biomedical engineering, and nanotechnology.

From reader reviews:

Michelle Curry:

In this 21st hundred years, people become competitive in each and every way. By being competitive right now, people have do something to make them survives, being in the middle of typically the crowded place and notice simply by surrounding. One thing that often many people have underestimated the idea for a while is reading. Yep, by reading a book your ability to survive enhance then having chance to stand up than other is high. For you who want to start reading the book, we give you this particular Ceramics and Composites Processing Methods book as nice and daily reading book. Why, because this book is greater than just a book.

Brent Jones:

This Ceramics and Composites Processing Methods are reliable for you who want to be a successful person, why. The reason why of this Ceramics and Composites Processing Methods can be one of several great books you must have will be giving you more than just simple studying food but feed anyone with information that perhaps will shock your prior knowledge. This book is actually handy, you can bring it everywhere and whenever your conditions throughout the e-book and printed kinds. Beside that this Ceramics and Composites Processing Methods giving you an enormous of experience including rich vocabulary, giving you tryout of critical thinking that we all know it useful in your day action. So , let's have it appreciate reading.

Matthew Armstrong:

Ceramics and Composites Processing Methods can be one of your nice books that are good idea. We recommend that straight away because this guide has good vocabulary which could increase your knowledge in terminology, easy to understand, bit entertaining but nevertheless delivering the information. The copy writer giving his/her effort to put every word into satisfaction arrangement in writing Ceramics and Composites Processing Methods however doesn't forget the main point, giving the reader the hottest in addition to based confirm resource info that maybe you can be certainly one of it. This great information can certainly drawn you into fresh stage of crucial contemplating.

Sena Meyer:

Do you really one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try and pick one book that you find out the inside because don't determine book by its deal with may doesn't work is difficult job because you are scared that the inside maybe not because fantastic as in the outside appearance likes. Maybe you answer is usually Ceramics and Composites Processing Methods why because the great cover that make you consider in regards to the content will not disappoint you actually. The inside or content is actually fantastic as the outside as well as cover. Your reading 6th sense will directly guide you to pick up this book.
